You will never have a bad hair day using a Micro Ear Headset featuring the...

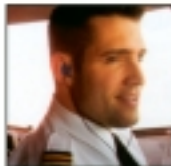

PANTHER C.A.T. SYSTEM

The 2001-ACFT Panther C.A.T. System is the 21st Century Replacement for the noise attenuating, noise cancelling Head Set and all other similar devices. The unique design does not interfere with eye or sun glasses and weighs ONE OUNCE eliminating the "Over The Head" or "Behind the Head Pressure Producing Head Band", not to mention the SWEAT PRODUCING EAR CUPS!

The "Heavy Boom Microphone" has been eliminated since all of the TRANSMITTED and RECEIVED AUDIO is derived from and delivered to the "Wearer's Ears". The Ear Pieces produce a Noise Reduction Rating (NRR) of up to 46 dB with custom ear pieces. They are connected to the Interface Controller with a lightweight, heavy duty cable and locking connector. The Controller interfaces directly to most General Aviation Avionics Packages, which include, Navigation, Communications, Radio and Intercoms. The Panther C.A.T. System is complete with an individual volume control for the wearer's comfort. In addition the Pilot Pro utilizes a Double Shielded Coiled Cord with gold plated Avionics Connectors to eliminate any possible interference when using it in close proximity to a hand held transceiver. The 2001-ACFT Pilot Pro Controller weighs only 9 ounces and is covered by a Limited Lifetime Replacement Warranty. The Ear Pieces and coil cord are covered by a One-Year Warranty against defects and workmanship.

"The Panther C.A.T. System is the Most Quiet, Most Comforting, Finest Made & Most Loved Headset!"
-Flight Captain Jack Nelson

Capt. Kelly says...
"Stick it in your ear!"

The heart of the C.A.T. System is the Dual Ear Pieces that weigh only one ounce. Head squeezing pressure and sweating around the ears has been eliminated since the C.A.T. System fits inside the Ear Canal. Because of the presence of Side Tone (the ability to hear yourself talk) in Aircraft's communications and Intercom Systems, one Ear Piece contains the Receiver Transducer and the other Ear Piece contains the Microphone Transducer. Without this configuration audio feedback would occur. The 2001-ACFT Pilot Pro C.A.T. System Controller's clip attached in a convenient location such as a pocket or window frame and the individual receiver volume control is located for easy adjustment. The ear pieces weighing only one ounce are connected to the controller with a locking connector. An adapter is also available for Helicopter and Military use.

Other PANTHER C.A.T. SYSTEM FEATURES & BENEFITS

- Weighs only ONE OUNCE.
- Talk through one Ear and Listen through the other
